

# Reciprocating Engine Conference

## **'Development of engine technology and emission control'**

Two day international conference

3-4 November 2010

IMechE HQ, 1 Birdcage Walk, London, UK

**The conference will cover developments in both diesel and gas engines relating to the need to meet forthcoming emissions legislation.**

New developments in turbocharger technology, common rail fuels systems, oil refining techniques and lubricant formulations will be presented.

In addition it is our intention to spend time considering the maintenance and repair of reciprocating plant.

Presentations will include a description of a series of failures in a power plant, assessment of the causes of failures in shell bearings, trend analysis on lubricating oil samples and remanufacturing of worn/damaged engine components.
